

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

<sup>t</sup> he three first stars of the Ram, and is directing her course through the mid space between the Pleiades and Aldebaran, which she reaches on the 24th. Her splendour will distinguish her notwithstanding the brightness of the sky in the mornings of this month.

Mars is on the meridian at 14 minutes past eleven on the night of the first, and at forty minutes past nine on the 19th.

Jupiter is in conjunction with the Sun on the 5th; and of course after that time, a morning star not to be distinguished till towards the end of the month, when he may be seen between Venus and the Sun at sun-rise.

Saturn is on the meridian at four minutes past one in the morning of the 1st, and at forty minutes past eleven at night of the 19th. As he rises within an hour after sun-set on the 1st, we shall have sufficient opportunities of observing him, and comparing him with Mars.

Herschell is on the meridian at nineteen minutes past ten in the evening of the 1st, and at fifty four minutes past eight of the 21st. The Moon passes him on the 4th.

The Sun's apparent diameter on the 1st, is thirty-one minutes, thirty-five seconds, and on the 19th thirty one minutes, thirty-one seconds.

*The ECLIPSES of the SATTELLITES of JUPITER are not  
visible this Month, JUPITER being too near the SUN.*

---

#### TO CORRESPONDENTS.

We are obliged to H.M.L., for his trouble in copying the Journal of a Wiltshire Curate. We decline to insert it, as we know it is not original. We think it appeared in the *Connoisseur*, a collection of periodical essays published many years ago.

---
